Lab Goals

- Personal Introduction
- Logistics
- Motivation

1.1 Personal Introduction

Task 1.1 Tell us your name, your favorite field, next step, and big ambition.

2 Logistics

Task 2.1 The lab accommodates *Tasks*, *Challenges*, and *Project*. Why are the three components necessary? In other words, Why don't we just practice on a project, or answer questions from the book's content?

Task 2.2 Documenting and sharing your learning journey is timely consuming. Do you think the time invested is worthwhile, in case you benefited from your colleagues documentation? Why?

Task 2.3 What kind of personal assistance you needed, and did not found in courses, as they had to follow a strict curriculum. If you were an instructor, How would you manage that?

Task 2.4 Create a discord account, using either your MSA's email or personal email, if you don't one already.

3 Motivation

Task 3.1 Search for job requirements on Linkedin or Wuzzuf. Is this course useful in anyway (You don't have to answer yes)?

Task 3.2 Set-out a plan for how this course is going to align with your personal career path.

Task 3.3 Create a linkedin account if you don't have already. Think of a good description to put on your resume.
